

1. Typography

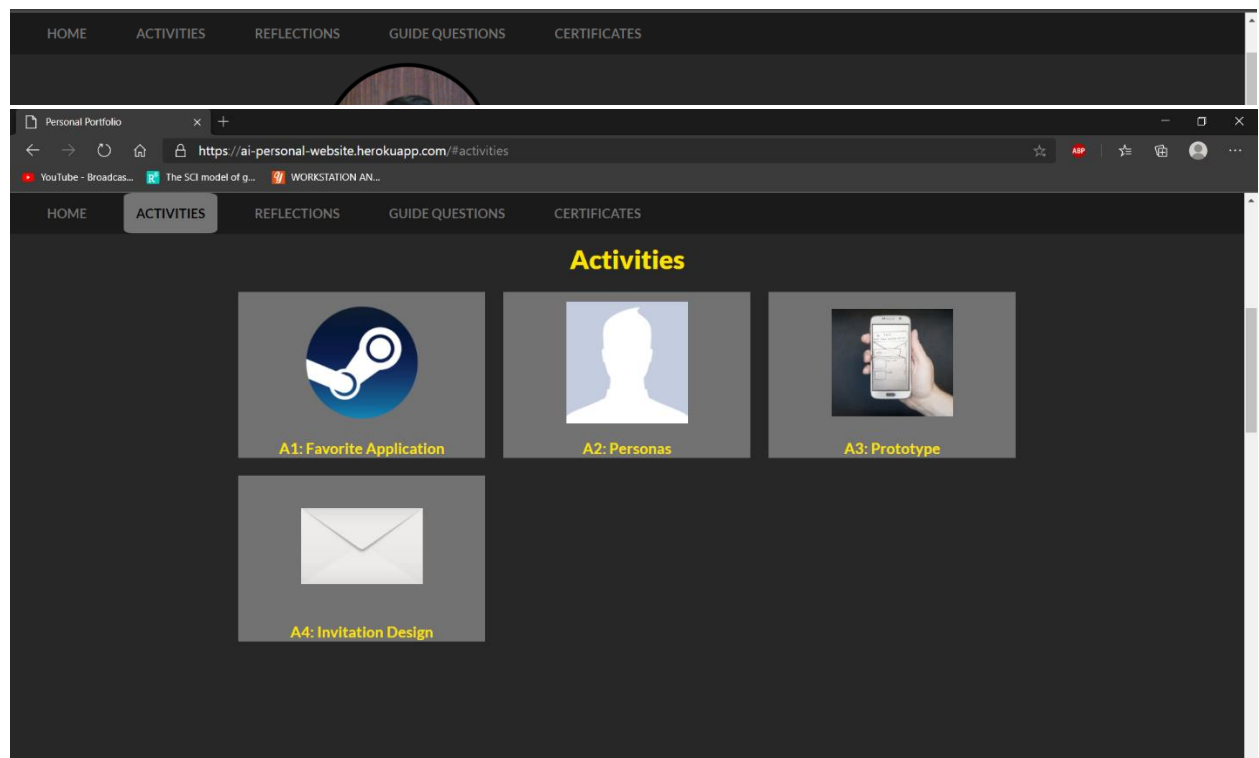

The website uses the font “Lato” and a variety of font weights, specifically light, bold, and 900.

2. Color Palette

The colors used are black for the navbar, #272727 for the background, #727272 for the navbar buttons and section dividers, and #FFE400 for the section titles, descriptions, and labels

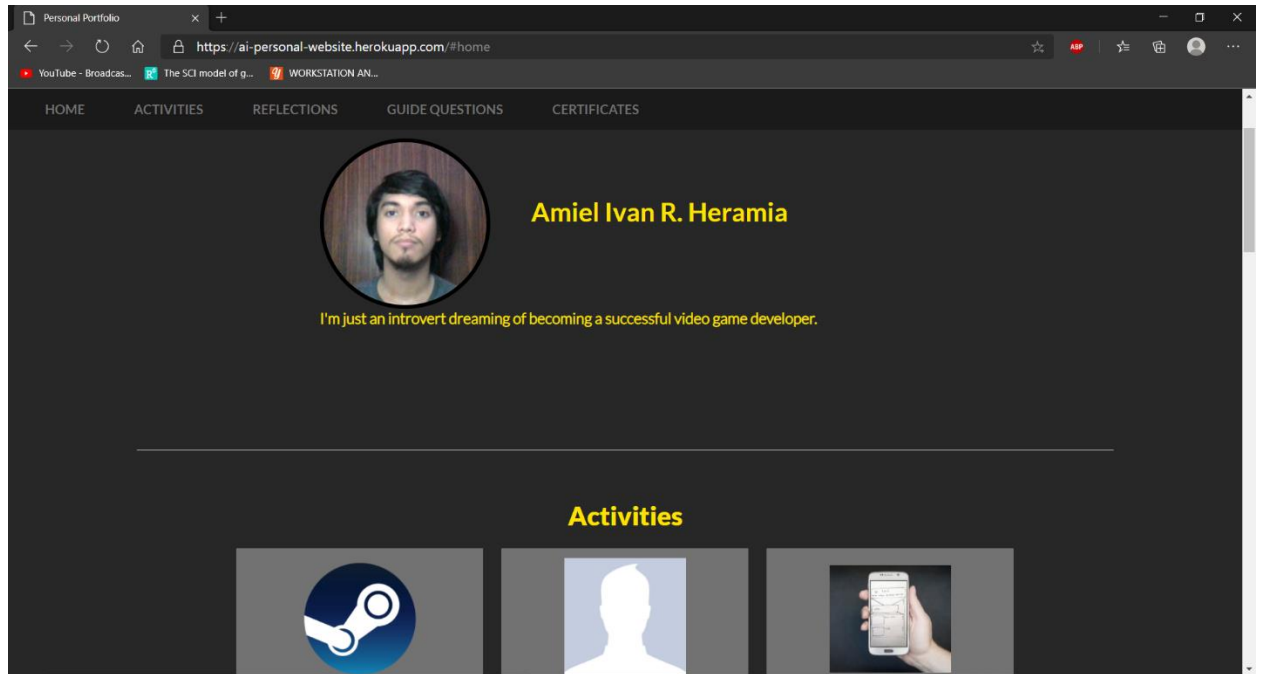

3. Global Navigation

The website has a top navigation bar which is fixed in that position even if the user scrolls down. Pressing a button on the navbar leads the user to the section that they have clicked on.

As seen above, by clicking the “Activities” button on the navbar, it leads the user to the Activities section of the website. Clicking on a box opens the file on a new tab.

4. Home Screen Design

The home page is one whole page that connects to all the sections on the website. By scrolling down, the users can manually go to specific sections or can also opt to use the navbar.
